Professional Summary:

DevOps Engineer with 5+ years of experience specializing in Kubernetes architecture, Azure Kubernetes Service (AKS), and cloud migration. Proven expertise in migrating on-prem Kubernetes workloads to AKS, including manifest transformation, persistent volume migration, networking, and identity integration. Strong background in Terraform, Helm, CI/CD pipelines, and containerized application platforms in regulated enterprise environments.

Technical Skills:

Kubernetes & Containerization	Kubernetes (AKS), Helm, Docker, StatefulSets, Deployments, Gateway API
Azure Cloud & Services	Azure VNET, Load Balancer, DNS, Azure Disks, Azure Files (Storage Classes), Azure AD, Azure Key Vault, AAD RBAC, Azure Monitor, Log Analytics, Container Insights
DevOps & Automation	Azure DevOps, GitHub, GitHub Actions, Jenkins, CI/CD, DevSecOps, Python, Bash, PowerShell
Migration & Infrastructure	Kubernetes → AKS Migration, YAML Manifest Transformation & Optimization, Persistent Volume (PVC) Migration (NFS, Ceph → Azure Storage), Infrastructure as Code: Terraform, ARM
Networking & Scheduling	Calico CNI (IP Pools, Network Policies, IPAM), Pod Affinity / Anti-Affinity, Taints & Tolerations, NodeSelectors
Infrastructure as Code	Terraform, ARM Templates, Infrastructure as Code (IaC)
Messaging & Databases	RabbitMQ, ActiveMQ Artemis, Couchbase, Memcached, MongoDB, PostgreSQL, Redis
Security & Governance	Kubernetes RBAC, Secrets, ConfigMaps, Pod Security Policies, OPA/Gatekeeper, Backup & Restore (Velero), DR strategies
Databases	MySQL, MS Access, DB2, NoSQL (Mongo DB, Dynamo DB), Cassandra
Monitoring & Troubleshooting:	Azure Monitor, Log Analytics, Prometheus, Grafana, Production Issue Troubleshooting
Networking/Protocol	TCP/IP, NIS, NFS, DNS, DHCP, WAN, SMTP, LAN, FTP/TFTP, Firewalls
Operating Systems	Ubuntu, CentOS, Red Hat Linux, Windows, Unix

Experience:

Kyndryl, Toronto, ON

April 2026 - Present

Senior DevOps Engineer | Kubernetes | Azure | Terraform | AKS

- Designed and managed Kubernetes (AKS) platforms supporting enterprise middleware and microservices workloads.
- Built and maintained Infrastructure as Code solutions using Terraform and Azure-native automation.
- Deployed and administered production-grade RabbitMQ, ActiveMQ Artemis, Couchbase, MinIO, and Memcached clusters on AKS.
- Implemented Azure Key Vault integration with Kubernetes Workload Identity and CSI Secret Store Driver for secure secrets management.
- Created and maintained Helm-based deployment workflows and Kubernetes manifests including StatefulSets, Deployments, Services, Gateway API resources, HealthCheckPolicies, and RoutePolicies.
- Automated deployment, configuration, and operational tasks using Bash, YAML, and Python scripting.
- Supported cloud-native modernization initiatives by migrating workloads from traditional infrastructure to Kubernetes-based environments.

FirstNationalfinancial, Toronto, ON

February 2023- April 2026

Azure Cloud Infrastructure Engineer

- Implemented monitoring and logging using Azure Monitor, Container Insights, and Log Analytics.
- Supported CI/CD onboarding using Azure DevOps, GitHub Actions, and Helm-based deployments.
- Implemented backup and disaster recovery strategies using Velero.
- Configured Prometheus, Grafana, and Elasticsearch for observability and alerting.
- Supported application teams in containerization and migration from VM-based workloads (Tomcat, Java apps).
- Worked closely with cross-functional teams to ensure reliable, scalable, and secure application deployments.
- Maintained consistency across DEV, QA, UAT, and PROD environments through infrastructure automation.

ADP, Chennai, IN

October 2019 - February 2023

DevOps Engineer/Azure Engineer

- Administered Linux servers (RHEL, Ubuntu) including user management, package management, system hardening, and troubleshooting.
- Managed Windows Server environments, including IIS hosting, services, and application deployments.
- Troubleshot Linux/Unix servers and application infrastructure, resolving system issues and improving stability.
- Provided hands-on support for cloud storage, backup automation, and efficient use of object storage.
- Oversaw monitoring systems for web and mobile applications, maintaining performance and uptime, troubleshooting Linux/Unix environments, and collaborating with teams to document and transfer knowledge effectively.

Gemini Consulting, Odisha, IN

December 2017 - October 2019 Software Engineer

- Administered Linux/Unix servers, performing installation, configuration, and monitoring.
- Configured Nagios monitoring and system alerting for infrastructure performance management.
- Implemented AWS infrastructure solutions including EC2, Auto Scaling, and load balancing.
- Maintained system security using firewall configurations and compliance monitoring tools.
- Collaborated with cross-functional teams, using Excel for data analysis and reporting, and effectively communicated project updates to stakeholders to ensure alignment and successful delivery.

SirsiDynix JAMM Migration Project

- Migrated middleware services from on-premises environments to Azure Kubernetes Service (AKS).
- Designed and implemented highly available deployments for RabbitMQ, ActiveMQ Artemis, Couchbase, MinIO, and Memcached.
- Integrated Azure Key Vault with Kubernetes workloads using Workload Identity and Secrets Store CSI Driver.
- Implemented Gateway API-based ingress routing, TLS termination, and health monitoring.
- Developed deployment automation and operational documentation for repeatable environment provisioning.
- Collaborated with platform engineering teams to standardize cloud-native deployment patterns and operational practices.

Education:

Master's in Agile Project Management

Northeastern University, Toronto, Canada

Bachelor of Technology in Computer

Science

Acharya Nagarjuna University, Andhra Pradesh, India

Certification:

- Google Cloud Certified - Professional Cloud DevOps Engineer
